Cards

Cards display content and actions about a single subject

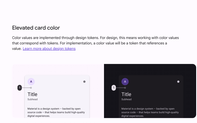
Resources: Figma, Jira, Zeplin

Tokens & specs

Select a component variant below to see its elements, attributes, tokens, and their values.

Card - Elevated	
Tokens	Default, Light
Enabled	
Enabled / Container	
Elevated card container color	md.comp.elevated-card.container.color: #FFFCFA
Elevated card container elevation	md.comp.elevated-card.container.elevation:
Elevated card container surface tint layer color	md.comp.elevated-card.container.tint.layer.color: #A70000
Elevated card container shape	md.comp.elevated-card.container.shape:
Elevated card container shadow color	md.comp.elevated-card.container.shadow.color: #000000
Enabled / Icon	
Elevated card icon color	md.comp.elevated-card.icon.color: #A70000
Elevated card icon size	md.comp.elevated-card.icon.size: 24dp
Disabled	
Disabled / Container	
Elevated card disabled container elevation	...ted-card.disabled.container.elevation:
Elevated card disabled container opacity	...ated-card.disabled.container.opacity: 0.38
Elevated card disabled container color	md.comp.elevated-card.disabled.container.color: #FEF7FF
Hovered	
Hovered / Container	
Elevated card hover container elevation	...evated-card.hover.container.elevation:
Hovered / State layer	
Elevated card hover state layer color	...elevated-card.hover.state.layer.color: #7D0000
Elevated card hover state layer opacity	...evated-card.hover.state.layer.opacity: 0.08
Focused	
Focused / Focus indicator	
Elevated card focus indicator color	md.comp.elevated-card.focus.indicator.color: #A10007c
Elevated card focus indicator thickness	md.comp.elevated-card.focus.indicator.thickness: 3dp
Elevated card focus indicator offset	md.comp.elevated-card.focus.indicator.outline.offset: 3dp
Focused / Container	
Elevated card focus container elevation	...evated-card.focus.container.elevation:
Focused / State layer	
Elevated card focus state layer color	md.comp.elevated-card.focus.state.layer.color: #7D0000
Elevated card focus state layer opacity	md.comp.elevated-card.focus.state.layer.opacity: 0.1
Pressed (rapid)	
Pressed (rapid) / Container	
Elevated card pressed container elevation	...ted-card.pressed.container.elevation:
Pressed (rapid) / State layer	
Elevated card pressed state layer color	md.comp.elevated-card.pressed.state.layer.color: #7D0000
Elevated card pressed state layer opacity	md.comp.elevated-card.pressed.state.layer.opacity: 0.1
Dragged	
Dragged / Container	
Elevated card dragged container elevation	...ted-card.dragged.container.elevation:
Dragged / State layer	
Elevated card dragged state layer color	md.comp.elevated-card.dragged.state.layer.color: #7D0000
Elevated card dragged state layer opacity	md.comp.elevated-card.dragged.state.layer.opacity: 0.16

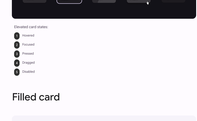
Elevated card



1 Container

Elevated card color

Color values are implemented through design tokens. For design, this means working with color values that correspond with tokens. For implementation, a color value will be a token that references a value. Learn more about design tokens

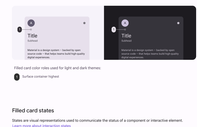


Elevated card color roles used for light and dark themes:

1 Surface container low

Elevated card states

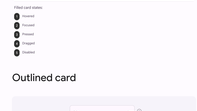
States are visual representations used to communicate the status of a component or interactive element. Learn more about interaction states



Elevated card states:

1 Hovered
2 Focused
3 Pressed
4 Dragged
5 Disabled

Filled card



1 Container

Filled card color

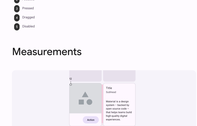
Color values are implemented through design tokens. For design, this means working with color values that correspond with tokens. For implementation, a color value will be a token that references a value. Learn more about design tokens

Filled card color roles used for light and dark themes:

1 Surface container highest

Filled card states

States are visual representations used to communicate the status of a component or interactive element. Learn more about interaction states



Filled card states:

1 Hovered
2 Focused
3 Pressed
4 Dragged
5 Disabled

Outlined card

1 Container
2 Outline

Outlined card color

Color values are implemented through design tokens. For design, this means working with color values that correspond with tokens. For implementation, a color value will be a token that references a value. Learn more about design tokens

Outlined card color roles used for light and dark themes:

1 Surface
2 Outline variant

Outlined card states

States are visual representations used to communicate the status of a component or interactive element. Learn more about interaction states

Outlined card states:

1 Hovered
2 Focused
3 Pressed
4 Dragged
5 Disabled

Measurements

Card padding and size measurements

Attribute	Value
Shape	12dp corner radius
Left/right padding	16dp
Padding between cards	8dp max
Label text alignment	Start aligned
