FAB menu

The floating action button (FAB) menu opens from a FAB to display multiple related actions

Resources

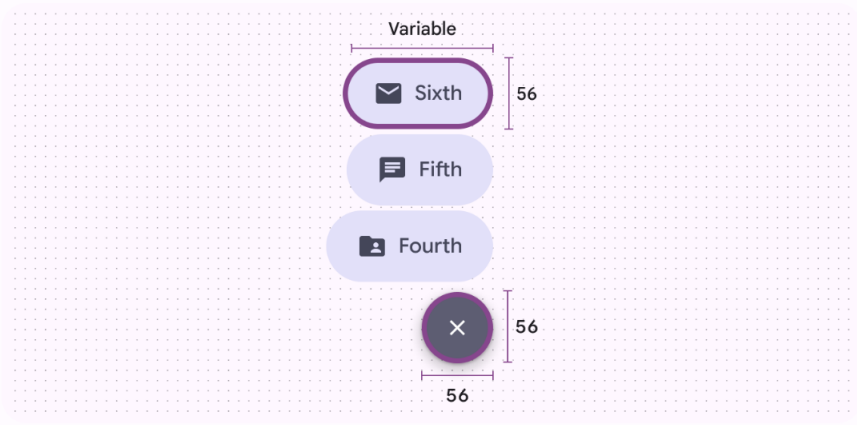
Use cases

People should be able to do the following using assistive technology:

- Navigate and interact with the FAB menu
- Ensure focus is correct when navigating through the menu

Interaction & style

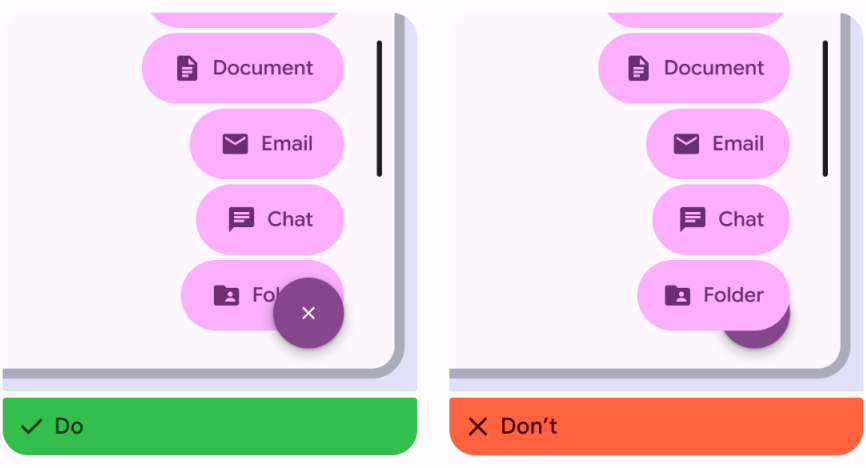
FAB menu elements meet the minimum target size of 48dp.



FAB menus have 48x48dp minimum width and sufficient spacing by default

When the FAB menu can scroll, make sure the items scroll behind the close button.

The close button should always be easy to access and unobstructed.



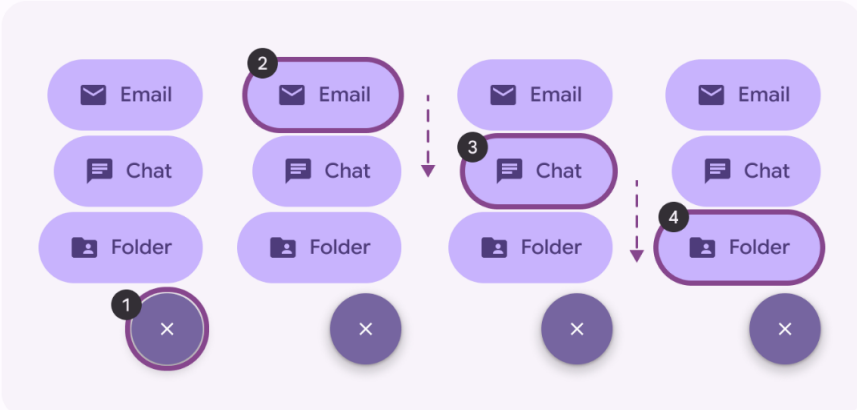
Allow the menu items to scroll behind the close button

Don't obstruct the close button in short screens like horizontal orientation

Initial focus

When the FAB is selected, the FAB menu opens, and initial focus remains on the close button, which takes the place of the original FAB.

Then the focus moves from the top menu item to the bottom.



Focus lands on the close button. People can then navigate through all the items.

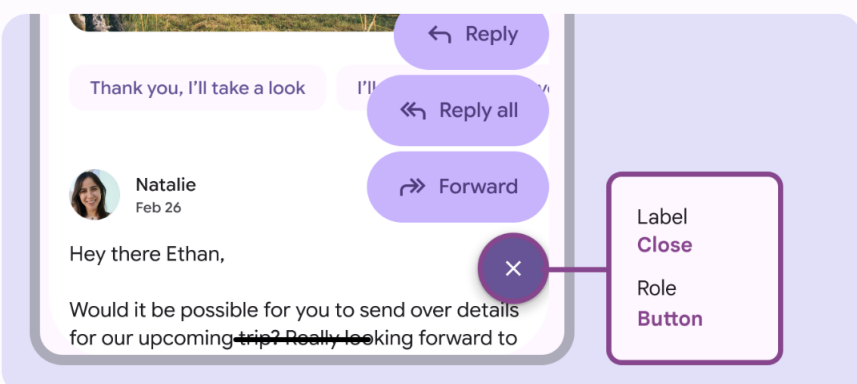
1. Close button
2. First menu item
3. Second menu item
4. Third menu item

Keyboard navigation

Keys	Actions
Tab	Navigate to the next interactive element
Space or Enter	Activate the focused button or item

Labeling elements

The close button of the FAB menu should have the **button** role and label **close**.



Label the close button with the button role

On mobile web, the items should have the **menu item** roles.

The menu items should have labels matching the UI text.

Label each FAB menu item with the menu item role
