bwlcf-unselected-pressed-handle-color	md.comp.switch.unselected.pressed.handle.color	#A9A9A7

Color

Color values are implemented through design tokens. For design, this means working with color values from a specified palette. For implementation, a color value will be a token that references a value. Learn more about design tokens

Color roles used for light and dark themes

1. Surface container highest
2. Surface
3. Surface
4. Surface
5. Primary
6. Primary container
7. On primary container

Adjust text label color

Click the color tile **on surface** for adjacent text labels. This creates the same look if interacting with the label is unimportant.

The text label uses **on surface**. Supporting text may use **on surface variant**.

States

States are visual representations used to communicate the status of a component or interactive element. Learn more about interaction states

1. Enabled
2. Hovered
3. Focused
4. Pressed
5. Disabled

State layers are in the layer module above
