Button groups

Button groups organize buttons and add interactions between them

Resources

Use cases

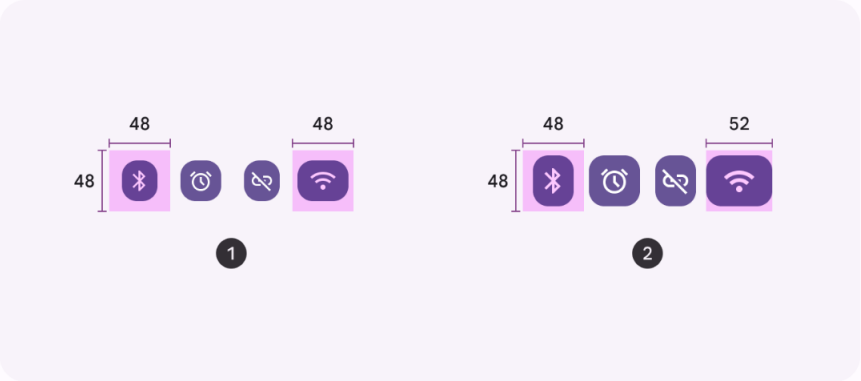
People should be able to do the following with assistive technology:

- Navigate to and interact with each button in the group
- Identify when buttons are selected

Interaction & style

Each button in a group should have a minimum 48x48dp target.

Extra small and small button groups have larger inner padding to ensure accessible targets. Avoid reducing the padding in these sizes.

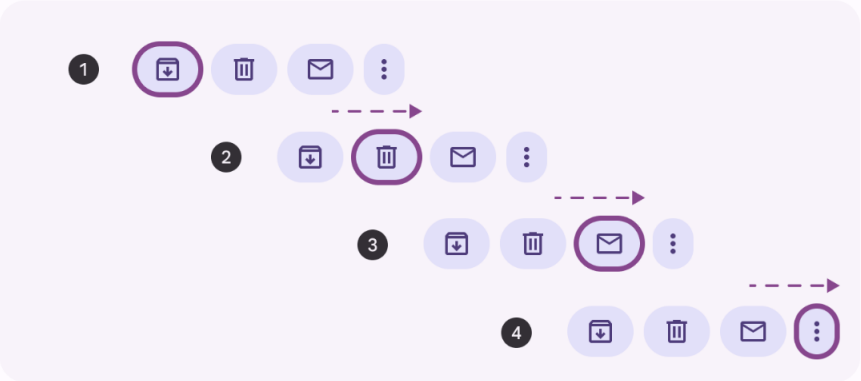


1 Extra small button group

2 Small button group

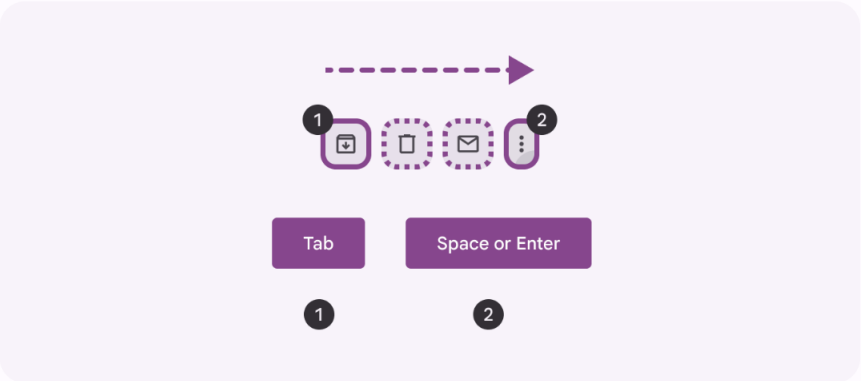
Initial focus

The button group container is not a focusable element. Initial focus should land on the first button in the group and then move to each button.



Initial focus should land on the first button, not on the container

Use **Tab** to navigate through each item in the group, and **Space** or **Enter** to select buttons.



1 Initial focus

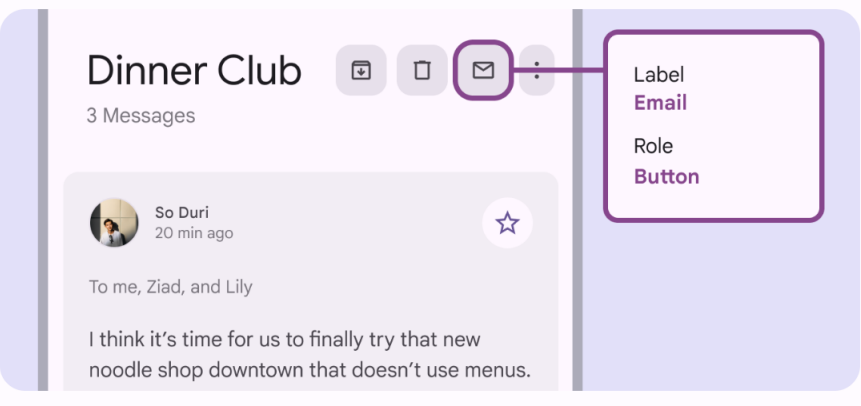
2 Selected button

Keyboard navigation

Keys	Actions
Tab	Navigates to the next button
Space or Enter	Activates the focused button

Labeling elements

The button group container does not need to be labeled. Label each button according to the button and icon button accessibility guidance.



Label each button within the button group
