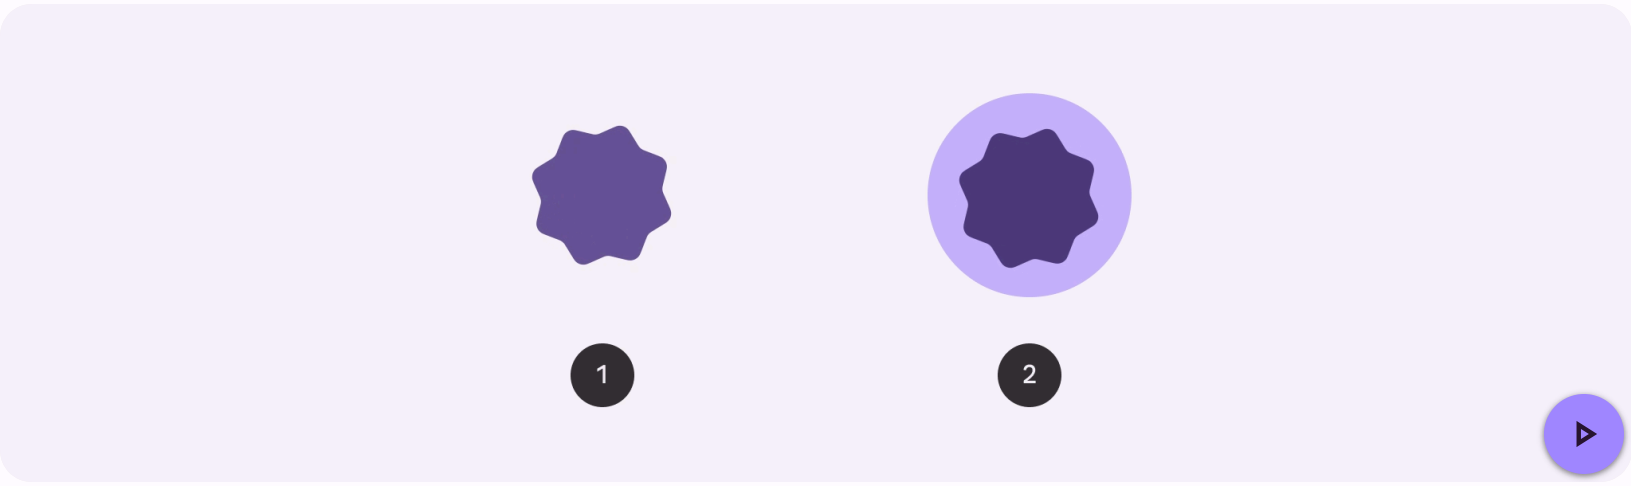
Loading indicator

Loading indicators show the progress for a short wait time

Resources

- Recommended as a replacement for indeterminate circular progress indicators
- Always reflect an ongoing process and are never simply decorative
- Used for pull-to-refresh interactions
- Not used for processes that transition from indeterminate to determinate
- Capture attention through motion



1 Loading indicator

2 Contained loading indicator

M3 Expressive update

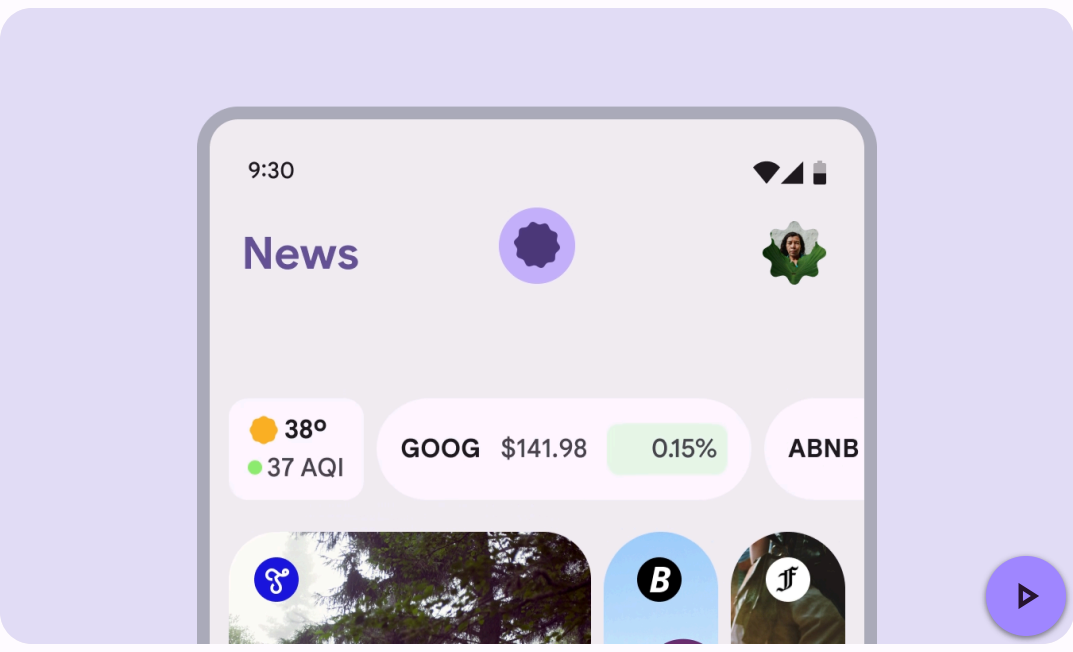
May 2025

The loading indicator is designed to show progress that loads in under five seconds. It should replace most uses of the indeterminate circular progress indicator. More on M3 Expressive

New component added to catalog.

Loading indicators:

- Are used in pull-to-refresh functionality
- Can be contained or uncontained
- Use shape and motion to capture attention
- Can scale in size



Loading indicators are used in the pull-to-refresh behavior
