Typography

Use typography to make content readable and beautiful

- M3 type scale has 30 type styles: 15 baseline and 15 emphasized
- Use variable fonts for more control over expression in editorial treatments
- Use Material tokens to easily define font, line height, size, tracking, weight, and more

Availability & resources

This shows where the type scale is available and implemented into Material components.

M3 Expressive update

May 2025

Updated M3 type scale with emphasized styles

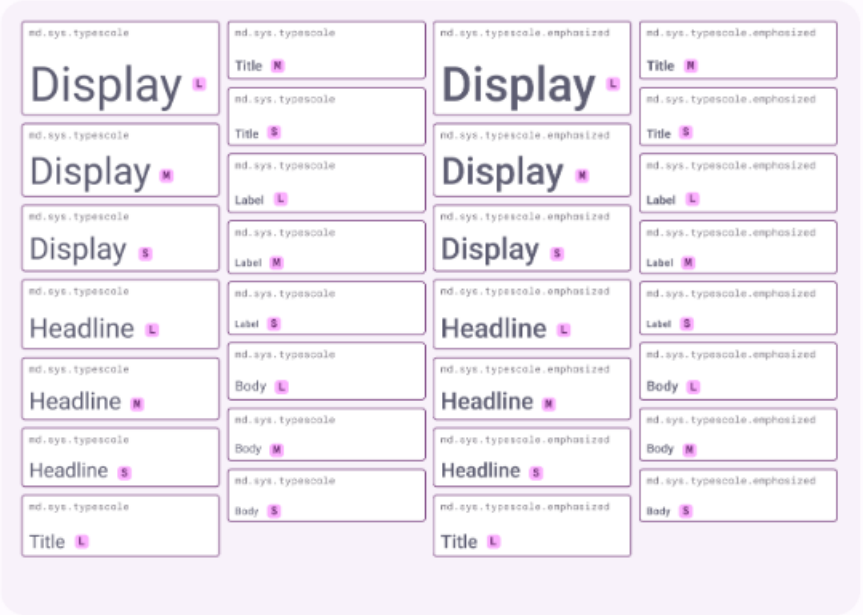
Material's type scale includes fifteen **baseline** type styles, the same as before, and fifteen new **emphasized** type styles.

The emphasized type styles add more expression to highlighted moments.

Roboto Flex can be used on its own to show a range of emotional states, but is not yet part of the M3 typescale.

More on how to use emphasized styles

More on M3 Expressive



The expressive type scale includes fifteen baseline type styles and fifteen emphasized type styles

Emphasized type style tokens

Design tokens offer an improved way to define typography in products by assigning an element's type style by a configurable value, rather than a set value.

Emphasized tokens allow for clearer hierarchies and prioritized components within a layout.

Type roles describe size—such as small, medium, and large—enabling them to adapt and respond to the device or context.

```
# Display Large
md.sys.typescale.display-large.font
md.sys.typescale.display-large.line-height
md.sys.typescale.display-large.size
md.sys.typescale.display-large.weight
md.sys.typescale.display-large.tracking

## Display Large Emphasized
md.sys.typescale.emphasized.display-large.font
md.sys.typescale.emphasized.display-large.line-
md.sys.typescale.emphasized.display-large.size
md.sys.typescale.emphasized.display-large.weigh
```

Typography tokens describe scalable size that adapts to devices or settings, including updating the style on boldness

Previous updates

Variable fonts

Roboto Flex, Roboto Serif, & Roboto Mono

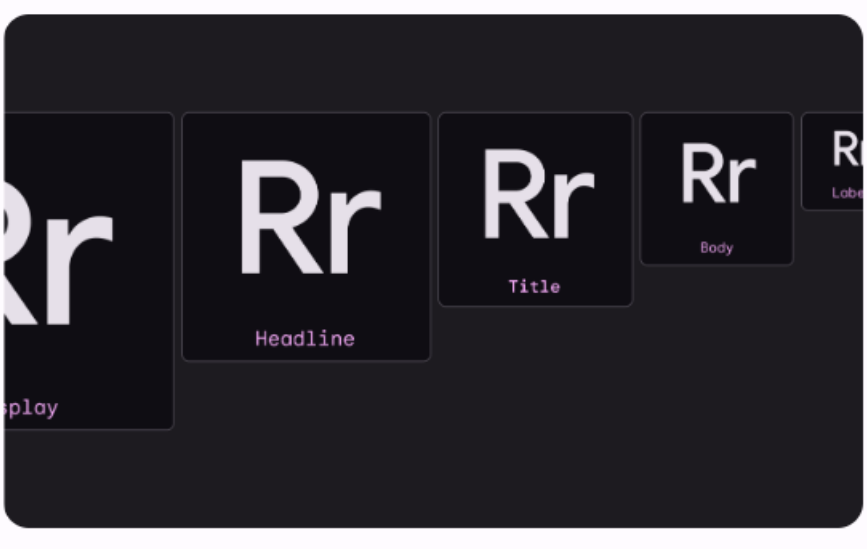
Updated considerations for using variable fonts and different combinations of their customizable axes, including grade, width, weight, slant, and optical size.

Roboto Flex, Roboto Serif, and Roboto Mono have a fluid range of axes, like weight, across all optical sizes

Style roles

Type styles are defined by five roles: display, headline, title, body, and label.

These names are more descriptive, allowing for easier matching of type style to use case.



M3 has five distinct type styles: display, headline, title, body, and label
